SUSE Enterprise Storage Implementation Guide for VMware ESXi

SUSE Enterprise Storage 5.5 and 6, VMware ESXi 6.7

David Byte
This guide provides instructions how to implement SUSE Enterprise Storage 5.5 or 6 as an iSCSI storage target for VMware ESXi.

Disclaimer: The articles and individual documents published in the SUSE Best Practices series were contributed voluntarily by SUSE employees and by third parties. If not stated otherwise inside the document, the articles are intended only to be one example of how a particular action could be taken. Also, SUSE cannot verify either that the actions described in the articles do what they claim to do or that they do not have unintended consequences. All information found in this article has been compiled with utmost attention to detail. However, this does not guarantee complete accuracy. Therefore, we need to specifically state that neither SUSE LLC, its affiliates, the authors, nor the translators may be held liable for possible errors or the consequences thereof.

1 Introduction

The objective of this guide is to present a step-by-step guide on how to implement SUSE Enterprise Storage 6 as an iSCSI storage target for VMware ESXi. The settings in this guide reflect the parameters necessary to achieve listing in the VMware Hardware Compatibility Guide (https://www.vmware.com/resources/compatibility/search.php?deviceCategory=san&details=1&partner=465&isSVA=0&page=1&display_interval=10&sortColumn=Partner&sortOrder=Asc) for SUSE Enterprise Storage 5.5. While the certification is on the prior version, the underlying iSCSI technology is the same with version 6, and thus the information contained herein applies equally to either version. It is suggested that the document be read in its entirety, along with the supplemental appendix information before attempting the implementation process.

The deployment presented in this guide aligns with the architectural best practices of both SUSE and VMware.

Upon completion of the steps in this document, a working SUSE Enterprise Storage 6 cluster will be operational, as described in the SUSE Enterprise Storage Deployment Guide (https://documentation.suse.com/ses/6/html/ses-all/book-storage-deployment.html) acting as a storage target VMware ESXi.

2 Solution Description

The solution outlined in this guide enables a customer to deploy SUSE Enterprise Storage as an iSCSI storage device for VMware ESXi.

3 Business Value

SUSE Enterprise Storage

SUSE Enterprise Storage delivers value in the following ways:

- Commodity hardware for minimal hardware cost
- Open source software, for minimal software cost and maximum flexibility
- A self-managing, self-healing architecture for minimal management cost
A flexible, cluster-based design for graceful and inexpensive upgrade and innovative licensing model that avoids per-gigabyte storage charges, so you won’t owe more for saving more data.

With minimal acquisition cost, management cost, and upgrade cost, SUSE Enterprise Storage is the lowest-price solution for enterprise archive and backup implementations.

**VMware ESXi**

VMware ESXi provides an Enterprise-Ready Virtualization infrastructure suite that is widely deployed.

**Solution Value Propositions**

Issue: Customer needs scalable, yet affordable storage for golden images, archive images, and software repositories. Solution: SUSE Enterprise Storage provides erasure-coded pools with exported iSCSI targets yielding low $/GB with adequate performance.

Issue: Customer needs storage with reasonable performance for virtual machines in addition to object storage. Solution: SUSE Enterprise Storage provides a single storage cluster that can service both the higher performance requirements of virtual machines and the lower performance requirements of Object Storage.

## Requirements

The solution has the following criteria:

- Simple to set up and deploy and meets the documented guidelines for system hardware, networking, and environmental prerequisites.

- Adaptable to the physical and logical constraints needed by the business, both initially and as required over time for performance, security, and scalability concerns.

- Resilient to changes in physical infrastructure components, caused by failure or required maintenance.

- Capable of providing block services via iSCSI to VMware ESXi.

- Is certified and present in the VMware Hardware Compatibility Guide.

- Data protection is configurable to meet the customer’s individual needs at a granular level.
5 Architectural Overview

SUSE Enterprise Storage provides everything that VMware needs for storage in a scalable and certified manner. The solution utilizes multiple gateways and network paths in an active-active manner with the VMware multipath I/O stack in a round-robin configuration to ensure that performance scales while providing fault-tolerance.

6 Pool Configuration

When configuring the SUSE Enterprise Storage cluster for use as a virtual machine datastore target, the data protection scheme is an important consideration. There are two main options for data protection, each with advantages and disadvantages.

6.1 Replication

The first is replication. Replication works by replicating each data chunk on each of the specified numbers of unique devices. The default is three. If the failure domain is assumed to be at the storage host level, this means the cluster could survive the loss of two storage servers without data loss. The downside of replication is the space overhead, which is 200% or two-thirds of the total cluster capacity.

The performance characteristics of replication are that it has lower latency than erasure coding and is generally the most performant data protection scheme. This is especially true where the I/O pattern is that of small random I/O.
6.2 Erasure Coding

The second scheme is erasure coding (EC). While there may be use cases such as archive datastores and software depots where the space efficiency of erasure coding makes sense, it is not recommended for use with pools hosting active VM images.

An exception to this policy might be made when the virtual machine image is hosted on a replicated pool, and the application itself performs large writes. In this case, it is possible to host the data volume on an erasure coded pool.

One of the most important factors in determining whether a write is large in this scenario is the number of data chunks (K) in the erasure coding scheme. If \( K \times 4\text{KB} \) is smaller than the I/O size used by the application, then a costly read-modify-write operation is avoided, resulting in reasonable performance. However, every I/O below that threshold incurs a penalty.

6.3 iSCSI

The iSCSI protocol provides SCSI commands and data transfers over a network interface. This protocol provides an option that is easier to consume for many end users than the competing Fibre Channel protocol due to iSCSI's use of standardized ethernet hardware and topologies.

In relation to SUSE Enterprise Storage, iSCSI is made available by means of one or more protocol gateways. These gateways translate between RBD and iSCSI, thus enabling clients that lack support for the more robust RBD, to access data stored on a SUSE Enterprise Storage cluster. The particular implementation used for certification utilizes the LIO kernel features and enables SUSE Enterprise Storage to act as an ALUA target. ALUA stands for Asymmetric Logical Unit Access and is the standardized set of functionality that enables a target to present multiple paths and to communicate back to the initiator. The net outcome being that the SUSE Enterprise Storage iSCSI stack enables active-active multi-pathing functionality and supports the round-robin policy, thus providing bandwidth aggregation and resilience against port failures.

7 Deployment Recommendations

This deployment section should be seen as a supplement to available online documentation. Specifically, the SUSE Enterprise Storage 6 Deployment, Administration, and Tuning Guides and the SUSE Linux Enterprise Server Administration Guide.
The following recommendations should be strongly considered:

- Enterprise-class SSD or NVMe media is preferable for performance-sensitive environments
- Spinning media should be 7200RPM or faster, enterprise-class devices
  - When deploying spinning media, RocksDB and WAL should be located on a flash device
- It is recommended that the network leverage jumbo-frame ethernet, including the network between the iSCSI gateways and the ESXi nodes. This allows for more efficient data transport.

8 iSCSI Deployment

This section outlines the steps required to deploy an environment similar in architecture to the tested environment.

8.1 Deploy and prepare SUSE Enterprise Storage Environment

Build and deploy a SUSE Enterprise Storage Cluster as described in the SUSE Enterprise Storage Deployment Guide. During the deployment process, be sure to deploy two or more iSCSI gateway roles.

It is advisable to tune the cluster, as can be found in the SUSE Enterprise Storage Tuning Guide (https://documentation.suse.com/ses/6/html/ses-all/book-storage-tuning.html).

8.1.1 Create Pool(s) for VMFS Datastores

1. Create at least one pool for each protection scheme (replication and EC) being supported. To create a pool, open the Dashboard, select Pools, then click Create.
   - It is strongly recommended that the Pool Type is replicated.
   - Be sure to set the Application to RBD.
2. Create the RBD image

To create the RBD that backs the iSCSI LUN, use the Dashboard interface under Block → Images.

- Select the pool created in the prior step.
- Click Advanced.
- Set the Object size to match the block size of the VMFS file system. The default for RBD is 4MiB, while VMFS defaults to 1MiB

**WARNING**

Do not modify the stripe unit or stripe count; they should both be left blank.
3. Create the iSCSI LUN
   Correct creation of the iSCSI LUN is necessary to support functionality utilized by VMware.

   - Under Bock→iSCSI→Targets, click Create.
   - Select Use the existing IQN or create a custom IQN for easy identification.
   - Modify the advanced settings for the target IQN by clicking the gear icon to the right. Set the following
     - default_cmdsn_depth:512
Add the portals (iSCSI Gateways).

Select the image created in the prior step.
Click the gear next to the image name. This opens the advanced options dialogue. In this screen, set the following values:

- `lun:{Desired LUN ID number}`
- `emulate_pr:0`
• emulate_tpu:1

• emulate_tpws:1

NOTE
The emulate_tpu and emulate_tpws settings toggle target support for space reclamation via SCSI UNMAP and WRITE SAME, respectively. These have some performance implications. It is up to the user to determine whether to optimize storage utilization by enabling these or to optimize performance, by leaving them disabled. See VMware’s documentation on space reclamation behavior (https://docs.vmware.com/en/VMware-vSphere/6.7/com.vmware.vsphere.storage.doc/GUID-BC1A172C-E649-4812-B8B2-A9E45AC97051.html) for more details.

4. Authentication
   If desired, CHAP authentication can be configured at this time.

8.2 VMware ESXi Configuration

There are a number of settings needed to ensure optimal configuration and operation of VMware with iSCSI targets. These settings are covered below.

• Set the iSCSI.MaxioSizeKB to 512
Ensure ATS only Locking From the ESX CLI, issue this command:

```bash
esxcli storage vmfs lockmode list
```

Information on changing a single LUN to ATS only can be found in the VMware documentation (https://docs.vmware.com/en/VMware-vSphere/6.7/com.vmware.vsphere.storage.doc/GUID-48E07447-5A9D-4DF1-BA70-713E07C054BC.html).

Set multi-pathing policy

VMware should always be multi-pathed to SUSE Enterprise Storage with at least two iSCSI gateways in the target portal. Traffic should be balanced across the gateways using the round-robin policy. In 6.7 and above the round-robin path selection now uses observed latencies. This results in the use of optimal pathing across the available gateways. Information on setting VMware multipath policy can be found in the VMware knowledgebase article #1017760 (https://kb.vmware.com/s/article/1017760).

An additional item would be to set the IOPS to send down a particular path before changing paths. This can improve load-balancing and shorten failover times. This adjustment can be accomplished by using the command line on the ESXi server. Information on adjusting this setting can be found in the VMware knowledge base article 2069356 (https://kb.vmware.com/s/article/2069356).

Documents published as part of the SUSE Best Practices series have been contributed voluntarily by SUSE employees and third parties. They are meant to serve as examples of how particular actions can be performed. They have been compiled with utmost attention to detail. However, this does not guarantee complete accuracy. SUSE cannot verify that actions described in these documents do what is claimed or whether actions described have unintended consequences. SUSE LLC, its affiliates, the authors, and the translators may not be held liable for possible errors or the consequences thereof.

Below we draw your attention to the license under which the articles are published.
11 GNU Free Documentation License

Copyright © 2000, 2001, 2002 Free Software Foundation, Inc. 51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA. Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other functional and useful document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondarily, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The "Document", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "you". You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.
A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document’s overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work’s title, preceding the beginning of the body of the text.
A section "Entitled XYZ" means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as "Acknowledgements", "Dedications", "Endorsements", or "History"). To "Preserve the Title" of such a section when you modify the Document means that it remains a section "Entitled XYZ" according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document’s license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.
If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.

B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.

C. State on the Title page the name of the publisher of the Modified Version, as the publisher.

D. Preserve all the copyright notices of the Document.
E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.

F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.

G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document’s license notice.

H. Include an unaltered copy of this License.

I. Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.

J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.

K. For any section Entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.

L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.

M. Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.

N. Do not retitle any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.

O. Preserve any Warranty Disclaimers.
If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties—for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.
In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements".

6. COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

7. AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an "aggregate" if the copyright resulting from the compilation is not used to limit the legal rights of the compilation's users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document's Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

8. TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all
Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements", "Dedications", or "History", the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided for under this License. Any other attempt to copy, modify, sublicense or distribute the Document is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See http://www.gnu.org/copyleft/.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation.

ADDENDUM: How to use this License for your documents

Copyright (c) YEAR YOUR NAME.
Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.2
or any later version published by the Free Software Foundation;
with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts.
A copy of the license is included in the section entitled “GNU
Free Documentation License”.

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the “ with...
Texts.” line with this:

with the Invariant Sections being LIST THEIR TITLES, with the
Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.

If you have Invariant Sections without Cover Texts, or some other combination of the three,
merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these
examples in parallel under your choice of free software license, such as the GNU General Public
License, to permit their use in free software.
